

# How secure is your iSeries?

We invite you to go through the points in the following checklist to see just how secure you really are.

1. Do you use 5250 terminal emulation connected through TCP/IP.  Yes  
 No  
 Don't know
2. Are there any other networked connections to your iSeries.  Yes  
 No  
 Don't know
3. Would you like to be able to restrict users to certain IP addresses?  Yes  
 No  
 Don't know
4. Do you use FTP and even if not, is your FTP port open (you can check this with the NETSTAT) command?  Yes  
 No  
 Don't know
5. If you allow external users to access your network, does your firewall have knowledge about which users should access which systems, what they may do and when?  Yes  
 No  
 Don't know
6. Is it possible that someone outside of your organization might trick one of your staff into revealing their user ID and password, and use that information to break into your computer?  Yes  
 No  
 Don't know
7. Could you do with an early warning system to let you know of any unauthorized access attempts via the network, through an existing ODBC connection or other networked means of entry?  Yes  
 No  
 Don't know
8. Is it possible that a someone inside your organization might unintentionally or deliberately see or even change important data in your system?  Yes  
 No  
 Don't know
9. Would there be value in being able to log and audit network activity just like the system journal allows you to audit system activity?  Yes  
 No  
 Don't know
10. Would there be value in having full control over  Yes  
 No

- different users database activities? For example you might wish to allow a particular user to transfer files from his PC to the iSeries into new member but prevent him overwriting existing data.  Don't know
11. Would you like to be able to see the kind of requests made by users of client access and other database applications?  Yes  
 No  
 Don't know
12. Is your iSeries connected to a network with any of these servers? Mainframe, Windows, Linux, UNIX  mainframe  
 Windows  
 Linux  
 UNIX
13. If you have any of the servers in 12, would you like to audit the security related activity on any or all these servers from a single PC?  Yes  
 No  
 Don't know

By now you will realize that some of the Yes's you have marked are probably things you'd like rather than things you've got. Others, you would rather the answer be No.

The good news is that we, at Bsafe Software Solutions, have built a software package that makes the wishes come true and eases the burden of worries you'd rather not have.

***Bsafe/Global Security for iSeries*** is that package. It is packed with features to enhance your iSeries and mainframe security plus audit your Windows, Linux and UNIX server activity. Contact OZ Global Software, Inc. for more information. Let us schedule a presentation with you to describe how Bsafe can give you peace of mind.

Phone (USA): 949-723-0644
